[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Creative Software Developer with 3+ years of experience building and maintaining usable features for SaaS Web apps. Proficient in HTML, CSS, and modern web frameworks like React and Angular and passionate about UI/UX design.

Skills

Frameworks/Libraries	• React • Angular • Express • Bootstrap • Electron • SASS
Languages	• JavaScript • Typescript • HTML • CSS
State Management	• Redux • Context
Database	• MySQL • PostgreSQL
Design Tools	• Adobe XD • Figma
Collaboration	• JIRA • Confluence • Teams • Slack
Versioning	• Git • Bitbucket • SourceTree

Experience

Webisoft, Mumbai

Software Developer | April 2021 – current

- Implemented a desktop app with React and electron for a healthcare company for managing medication records.
- Implemented client side of a crypto exchange app by integrating terra wallet and getting information from smart contracts to display details as part of the dashboard.
- Worked on adding features to an existing application to load their app through an iframe onto their partner's websites in Laravel.
- Converted an existing Mental Health Note taking app based in Laravel to react with customization as a core feature.

BPM-D, Mumbai

Solution Developer | March 2019 – November 2019

Associate Solution Developer | May 2017 – Feb 2019

- Implemented features such as Dashboards and information panes for BPM-D's SaaS B2B platform built on Angular and PHP.

- Built reusable UI components like form controls to improve efficiency and decrease code redundancy.
- Created proof of concepts for new features to evaluate and test how the final version will work.
- Performed code reviews to achieve clean maintainable code and ensure standard practices are implemented.

Projects

Agile Board ([See live](#))

Front End implementation of a Scrum board built with React and Redux where tasks can prioritize and be labeled based on user's requirements.

[React, Redux, JavaScript]

COVID-19 Tracker ([See live](#))

Integrated disease.sh API to create a COVID-19 tracker to visualize global stats and vaccination efforts in different parts of the world.

React, Context, JavaScript, Leaflet JS, Disease.sh API

Portfolio Website ([See live](#))

A website to demonstrate my skills and projects and a medium for people to view my projects and contact me to collaborate on projects.

Angular, TypeScript

Wheel For Change (College Project)

Collaborated to deliver a full-fledged prototype along with supporting research including personas, user journey and competitive analysis for a Startup wanting to build an investment platform to connect Social entrepreneurs with potential investors.
